

dunbrik flues	Dunbrik A1 Concrete Flue Liners	Product safety data sheet
Description	Pre-cast concrete components	
Physical properties	Flue liners made from Portland cement and lightweight aggregate	
Handling & storage	Manual handling should be avoided as far as is reasonably practical. An assessment should be made, taking into account the load, environment, task and the individual's capacity and training. Employ good lifting techniques. Storage should be on level ground. When stacked the components should be restrained from falling over. Remove products from the top of the pallet and avoid cutting the wrapping at the side.	
Accidental release measures	No environmental release danger.	
Waste disposal	Pre-cast concrete products should be disposed of at an approved solid waste disposal or landfill site in accordance with local authority guidance.	
Fire and explosion	Use all standard fire fighting media. No special hazard.	
Personal protection	Hand protection - Gloves (but these may reduce grip when manually handling) Foot protection - Steel toe capped shoes / boots	
Hazard identification	Non hazardous	
Transport information	Materials are suitable for bulk transport, securely wrapped on pallets.	
Emergency and first aid procedure		
Skin contact	Wash with water, prolonged skin contact may cause irritations	
Eye contact	Contact with eyes may cause irritations and should be irrigated with plenty of water	
Ingestion	Not applicable	
Inhalation	Not applicable
